

EMERGING TRENDS IN SECURITY

sponsored by Cochran, Iomnis, and Genetec

December 7, 2011, 3 PM to 6 PM

Apex at Alder Ridge: 14450 Woodinville-Redmond Road #105, Woodinville WA 98072
Located in the heart of Woodinville's wine tasting area, Apex at Alder Ridge brings the feeling of Horse Heaven to the Westside of Washington State. Guests will be treated to appetizers and a taste of a wide selection of highly-acclaimed Apex and Alder Ridge wines, grown on its own estate vineyard.

AGENDA

3:00 pm to 3:15 pm	Registration, wine, and networking
3:15 pm to 4:00 pm	Josh Snow, CCNA, Vunetrix: Josh will speak about new methods to monitor real-time security network monitoring solutions. What exactly is happening in your network? Networks can capture, store and manage vast amounts of data, yet information on network performance has always been too little, too late. From a single web-based portal, Vunetrix lets you monitor network bandwidth, usage, performance and availability to avoid bottlenecks, optimize efficiency, pinpoint faults and make fact-based resource planning decisions.
4:00 pm to 4:30 pm	Mark Niehus, RCDD, Iomnis.: End-users are challenged with providing properly-sized servers and storage for CCTV applications. Iomnis offers purpose-built servers and storage optimized for video, along with a patented configuration process which removes the risk and guess-work, saving clients time and money.
4:30 pm to 5:15 pm	David Chauvin, Genetec: David will be discussing the benefits of unified security applications, which can streamline your security operations, reduce the user learning curve and leverage existing infrastructure investments. By eliminating the need for costly and temporary integrations, a unified platform will help you exceed your security and operations objectives in a more efficient and effective manner.

SPACE IS LIMITED!
